B.Tech CSE (1st Year) | AI-Native Product Designer | Shipping real-world products with code

PITCH

Transitioned from high-fidelity UI design to AI-native engineering, specializing in building resilient design-to-code systems. Shipped 5+ products using Next.js 15 and Tailwind v4, focusing on performance and premium UX.

Core competencies and impact

DOMAIN	TASK AND IMPACT	KEY SKILLS
Figma	Designed high-fidelity, brand-sensitive UI/UX for Sortedd (luxury concierge: trust, restraint, premium polish) and SaaS onboarding flows.	Design systems, auto-layout, prototyping, visual hierarchy.
AI Dev	Built production-ready design-to-code workflows and rapid iteration systems for AI-assisted product shipping.	Rapid prototyping, API integration, technical feasibility, product-to-engineering translation.
Web Tech	Developed responsive interfaces with motion (GSAP, Framer Motion) on Next.js 15.	Tailwind CSS v4, TypeScript, Git/GitHub, Vercel.

Professional experience

INTERNSHIP

Design Intern @ Mythaverse (Jan 2026 – Apr 2026)

- Designed and shipped UI for SaaS products from wireframes to developer-ready specs.
- Reduced developer handoff time by 20%** through reusable design systems and cleaner Figma-to-dev delivery.
- Collaborated with engineering to improve design-to-code consistency and production quality.

FREELANCE / CONTRACT

Design & Dev Contractor | Sortedd

- Challenge:** Balance **luxury-brand UX** (quiet confidence, editorial typography, motion that feels expensive—not flashy) with a **technical lift**: migrating a legacy concierge site to **Next.js 15** (App Router) and Tailwind CSS v4 without diluting the brand.
- Action:** Rebuilt layouts and components for App Router, performance budgets, and maintainable design tokens while preserving high-trust visual language end users expect from a premium service.
- Result:** **Reduced bundle size by 30%** and **improved PageSpeed score from 65 to 92**; **100% design-to-code match** on shipped screens.

Outcome: Live site shipped with strong client feedback—product story and engineering migration aligned.

Education

GLA University – B.Tech CSE, Greater Noida

Aug 2025 – 2029

R.A.N Public School – High School, Dibdiba

Projects

LuxeGen — AI-Native Design-to-Code Workspace

Next.js 15, Gemini 1.5 API, Tailwind CSS v4, Framer Motion

- Implemented a **Custom Regex Sanitizer** to handle unstable AI code streams, ensuring valid React syntax in live previews.
- Architected a fail-safe deployment pipeline on Vercel for monorepo structures, resolving root directory and routing conflicts.
- Integrated **Exponential Backoff** and retry logic to recover from Gemini API 429 (Rate Limit) and 503 (Overloaded) errors.
- Bridged the gap between unstable LLM outputs and production-ready React components.**
- Impact:** Improved production reliability by auto-recovering from partial AI code generation and malformed syntax.

Sortedd ([Live demo](#)) | ([Behance case study](#))
Luxury concierge — contract (see Freelance / contract)
Simplified a complex luxury concierge experience into a 3-step onboarding flow while maintaining premium brand feel.
Live: [Sortedd](#)

Thinkmate – Transforming the Future of Education ([Live demo](#))
Next.js, Framer Motion, Gemini API, SVG animation
Issue: Complex HR/B2B flows were hard to visualize. **Solution:** Next.js and Framer Motion with SVG neural-network motion, plus **Gemini API** integration for real-time educational coaching cues and adaptive micro-copy.
Other projects: Bridge The Gap, Robotic Arm Control UX, Lynkit (Navigator).

Technical toolkit

Design: Figma (Expert), Prototyping, Design Systems, Adobe Suite. **Development:** Next.js 15, Tailwind CSS v4, React, TypeScript, GSAP, Framer Motion, **Vercel (deployment workflows).**

AI systems: AI streaming architecture, resilient API handling, and code-sanitization pipelines for reliable live previews.

AI tools: Cursor (Expert, AI-pair programming, vibe coding), VO.dev, Midjourney.
